New Chat

Send authenticate and inspect token

Run employees request with new token

Automate both calls in a single run

Describe what you need. Press @ for context, / for Skills.

Auto

IDE interface showing a Spring Boot application project named "spring-learn". The project structure is visible in the left sidebar, including packages like `com.example.spring_learn` and `controller`. The `AuthenticationController` class is selected in the `controller` package.

The main editor displays the `AuthenticationController` class, which is annotated with `@RestController`. It contains a `createAuthenticationToken` method that takes an `AuthenticationRequest` object and returns an `AuthenticationResponse`. The method prints "START - Authentication", "END - Authentication", and a dummy token.

```
6
7
8 @RestController
9 public class AuthenticationController {
10
11     @PostMapping("/authenticate")
12     public AuthenticationResponse createAuthenticationToken(
13         @RequestBody AuthenticationRequest request) {
14
15         System.out.println("START - Authentication");
16
17         System.out.println("Username : " + request.getUsername());
18         System.out.println("Password : " + request.getPassword());
19
20         System.out.println("END - Authentication");
21
22         // Dummy token for now
23         return new AuthenticationResponse( token: "dummy-jwt-token");
24     }
25 }
```

The bottom panel shows the Run console output, indicating the application is running successfully. The output includes log messages from the Spring framework and the application's output.

```
2026-07-04T23:03:39.765+05:30 INFO 12312 --- [spring-learn] [nio-9091-exec-1] o.s.web.servlet.DispatcherServlet
2026-07-04T23:03:39.766+05:30 INFO 12312 --- [spring-learn] [nio-9091-exec-1] o.s.web.servlet.DispatcherServlet
2026-07-04T23:03:40.142+05:30 WARN 12312 --- [spring-learn] [nio-9091-exec-1] w.s.m.s.DefaultHandlerExceptionResolver
START - Authentication
Username : user
Password : pwd
END - Authentication
```

The bottom status bar shows the file path: `spring-learn > src > main > java > com > example > spring_learn > controller > AuthenticationController`. The status bar also indicates the file encoding is UTF-8 and the line separator is CRLF.
